**DETAILED ACTION**

***Response to Arguments***

1. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.

***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sparks et al., US 6,363,213 in view of Cohen-Solal, US 7,206,029.

In considering claims 1-8, 10-11 and 13,

Sparks discloses a digital recorder and display wherein the display 300 (Fig 1,2) displays digital information which is received via antenna 50, packet source, 75, tape packet source 200, or an analog video input (Fig 2). The system allows a user to display an image in addition to displaying on-screen display (OSD) "status messages" to the user based upon a user's selection of the operating mode (i.e. slow-motion, record, rewind, etc...), which is superimposed onto said image.

Although Sparks does not explicitly recite the conventional capability of an adaptive PIP which accounts for one or both images to determine the position, color and/or size of such images, the practice of such is notoriously well known in the art as evidenced by Cohen-Solal, US 7,206,029 as shown in Figs 2a/b/c and 3.

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to modify Sparks which discloses the use of on-screen displays by accounting for the position/size/color

of such images as done conventional (i.e. Cohen-Solal) in order to provide the viewer(s) a distinguishable yet uninterrupted picture.

In considering claim 9,

Sparks does not explicitly recite an "optical disk", however Sparks does disclose a digital video recorder including D-VHS or DVC format.

There are a multitude of conventional formats available in the market in addition to the disclosed D-VHS or DVC including an "optical disk", and since these are off the shelf items/features available to any user the examiner takes "OFFICIAL NOTICE" regarding as such.

In considering claim 12,

Although neither Sparks nor Cohen-Solal disclose the common practice of outputting still images, the use of such is notoriously well known in the art, wherein a still image typically provides a user information pertaining to an item/program without using as much information/bandwidth as moving images, thus the examiner takes "OFFICIAL NOTICE" regarding such.

### ***Conclusion***

3. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure—see newly cited references on attached form PTO-892.

The Patent Electronic Business Center (EBC) allows USPTO customers to retrieve data, check the status of pending actions, and submit information and applications. The tools currently available in the Patent EBC are Patent Application Information Retrieval (PAIR) and the Electronic Filing System (EFS). PAIR (<http://pair.uspto.gov>) provides customers direct secure access to their own patent application status information, as well as to general patent information publicly available. EFS allows customers to electronically file patent application documents securely via the Internet. EFS is a system for submitting new utility patent applications and pre-grant publication submissions in electronic publication-ready form. EFS includes software to help customers prepare submissions in extensible Markup Language (XML) format and to assemble the various parts of the application as an electronic submission package. EFS also allows the submission of Computer Readable Format (CRF) sequence listings for pending biotechnology patent applications, which were filed in paper form.
